ABSTRACT

A compilation of materials which are productions of the 19 Research and Training Centers, this bibliography of rehabilitation research is prepared as part of the Centers' Information Exchange and Clearinghouse Program. The specific intent of the program is to enhance the communication process between the Centers concerning their scientific activities. Bibliographical references appearing are entered by Center title and numbered in consecutive alphabetical order by author. Other contents include: (1) a permuted subject index, (2) an author index, and (3) addresses of the Research and Training Centers. (Author/SN)

## FOREWORD

This publication is another in the Special Centers series that has been prepared as part of its Information Exchange and Clearinghouse Program established to promote the exchange, dissemination, and utilization of information concerning the scientific activities of the nineteen Research and Training Centers. In addition to the RT Center annual Directory of Research, the Directory of Training of the Rehabilitation Research and Training Centers, the quarterly newsletter, and this bibliography, a compilation of audio-visual aid materials developed by the Centers to supplement training activities is to be published which will further enhance the communication process between the Centers, SRS Regional Offices, the state and community rehabilitation agencies, and the SRS/RSA Central Office.

This publication also reflects the implementation of another recommendation made by the RT Center representatives at one of the annual meetings.

## INTRODUCTION

Wide dissemination and promoting the utilization of new knowledge resulting from research findings are important functions of Research and Training Centers. The publication of research findings and training materials in professional journals, monographs, and books is one of the ways the RT Centers have accomplished these objectives. Accordingly, this document reflects a compilation of publications resulting from RT Center research and training activities in an endeavor to further this mission. The period of primary publication encompassed by the bibliography extends from the inception of each individual Center (establishment of the first two Centers was 1961) through June 30, 1971. While periodic supplements to this document are planned, listings of RT Center publications have been kept current in the Special Centers newsletter *Informer*. This volume is a selected bibliography since citations could not be included where essential information for retrieval was lacking; in other cases, certain monographs were out of print.

It may be of interest to note that a preliminary analysis of the 1443 citations contained in this bibliography reveals over 407 different publication sources for the material. The majority of these sources are scientific serials published in various countries, but a significant number of books and monographs also appear. As 12 of the RT Centers specialize in medical rehabilitation, three in vocational rehabilitation, three in mental retardation, and one in deafness, the greatest number of articles (245) appeared in the *Archives of Physical Medicine and Rehabilitation*. However, as many as 146 journals published only one article each for this period. These two extremes illustrate the spread of the literature one finds in virtually every scientific discipline and the numbers of publications one would need to read regularly to keep current with the field of rehabilitation. Hopefully, this bibliography will serve as a valuable aid to rehabilitation professionals, students, and researchers attempting to keep up with new knowledge directed toward benefiting the disabled population as well as serving it more effectively.
